Innovative Concepts for
Teaching Informatics

INFORMATICS in SECONDARY SCHOOLS Evolution and Perspectives

Wed, March 30th - Fri, April 1st 2005

Dear visitor! The conference is over.
We thank for Your interest and the positive feedback.
[Pictures](#) and [lecture slides](#) are online.

[FINAL PROGRAMME](#)
[for Austrian teachers: [Erlass des BMBWK](#)]

[You can download a conference booklet for offline viewing \(PDF, 700kB\) here](#)

The ISSEP conference took place from March 30th '05 - Apr 1st '05.
in Klagenfurt, Austria, hosted by the [University of Klagenfurt](#).

It was organized by the [Department of Informatics-Systems \(ISYS\)](#)
Universitätsstrasse 65, A-9020 Klagenfurt
issep@isys.uni-klu.ac.at
[University of Klagenfurt](#)

2005: Need for a framework

- The digital gap in this type of school between the pupils/students is unacceptably wide
- There is a need for a reasonable framework which ensures a certain level of **E-Literacy**
- Students leaving lower secondary level should prove a „reasonable standard of **Informatics Competence**
- **Concretion of the curriculum** in the grade 9 is of high concern

2005: Conclusions

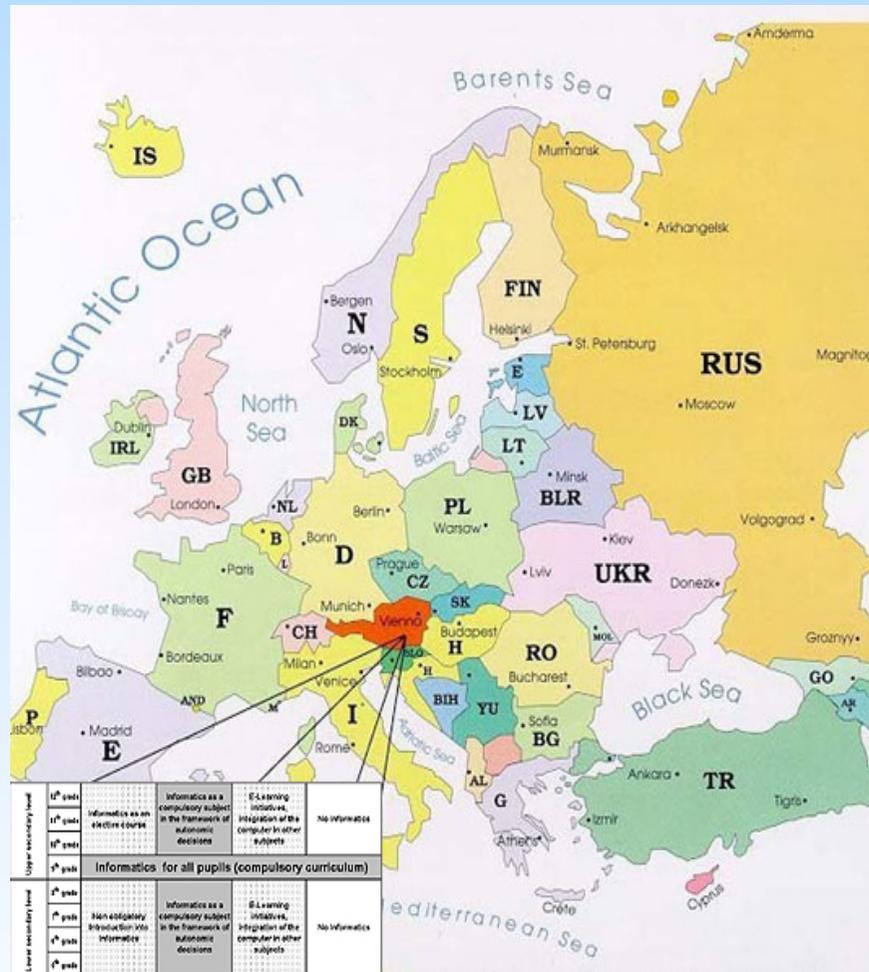

- The situation/role/importance of ICT/Informatics **differs extremely from school to school** – due to autonomy, as well as the IT-knowledge and **informatics competences** of the pupils/students!
- **Standardizing measures** especially **up to** and especially for grade 9 (end of compulsory education) should be taken
- I suggest the **simplification of the terminology** in the context of **ICT** and **Informatics**.
(Actually, Mathematics in schools covers the range from primitive calculating to abstract proving ...)

Why shouldn't the subject „**Informatics**“ stand for elementary **ICT-Competences** as well as for „**Real (Pure) Informatics**“?

Reflections on Software Tools in Informatics Teaching

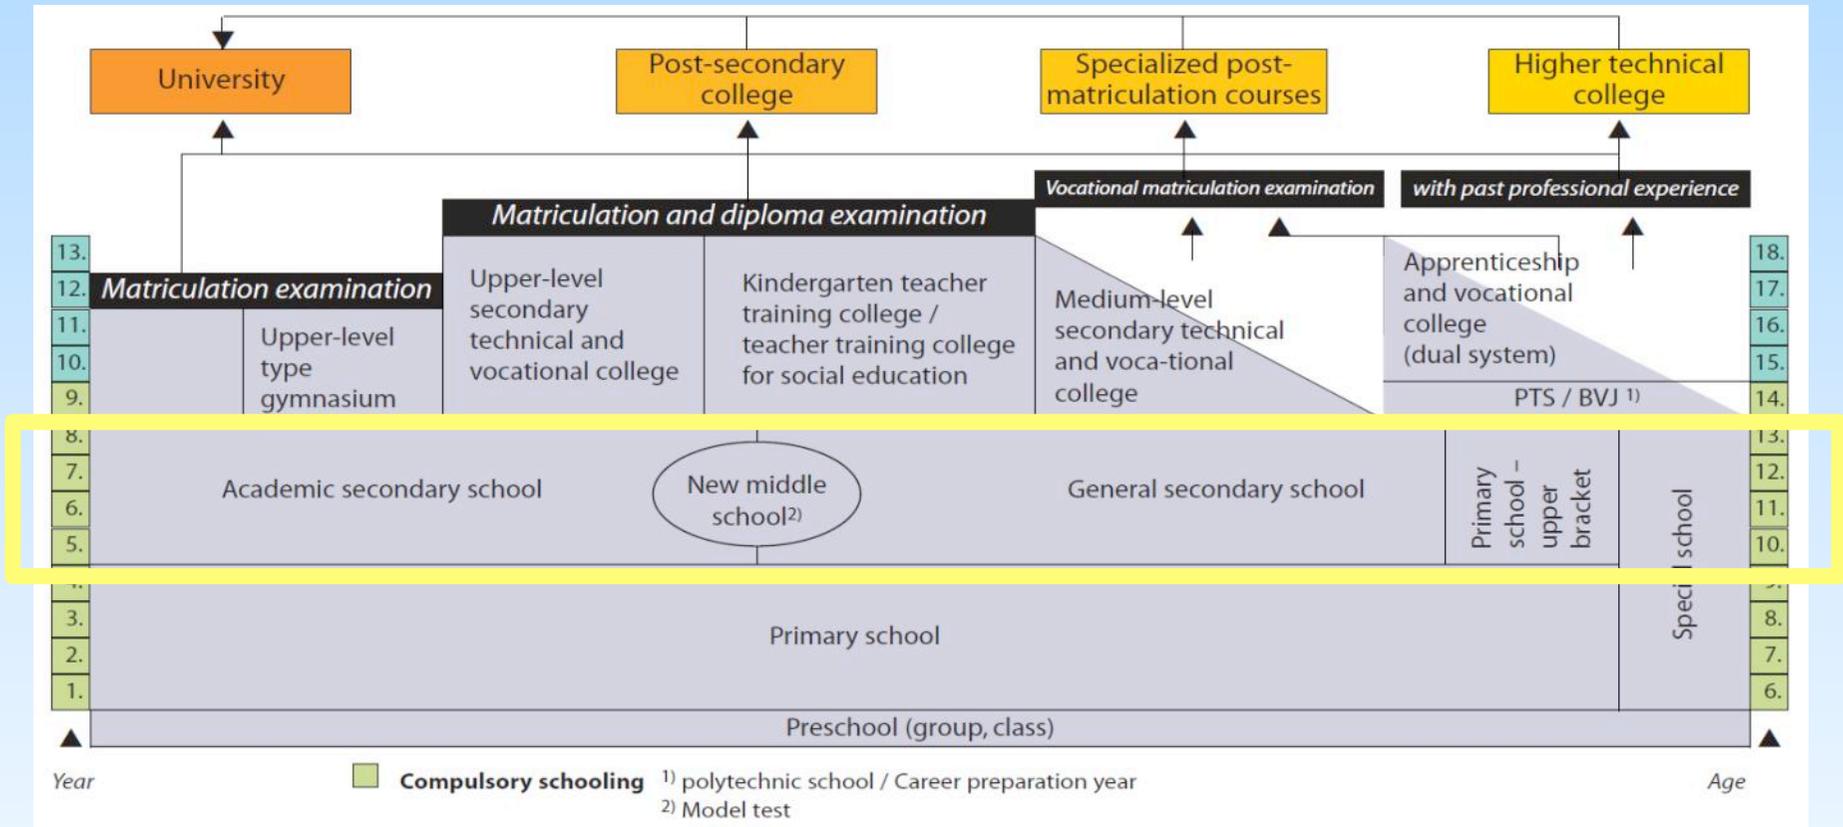

An European view

The digital landscape of schools all over Europe is very inhomogenous and different ...

In 17 countries there is a common currency (EURO) ..., but no common understanding at all about ICT/Informatics Education at lower secondary level!

The Austrian School System

380.000 of about 1.200.000 pupils/students in Austria in Lower Secondary Education

Results of the autonomy

Upper secondary level	12 th grade	Informatics as an elective course	Informatics as a compulsory subject in the framework of autonomic decisions	E-Learning initiatives, integration of the computer in other subjects	No informatics
	11 th grade				
	10 th grade				
	9 th grade	Informatics for all pupils (compulsory curriculum)			

Lower secondary level	8 th grade	Non obligatory Introduction into Informatics	Informatics as a compulsory subject in the framework of autonomic decisions	E-Learning initiatives, integration of the computer in other subjects	No Informatics
	7 th grade				
	6 th grade				
	5 th grade				

ICT – Informatics – computer science

Can these assignments help us?

ICT ⇔ instruction, training, practical,
applying software, skills and competencies

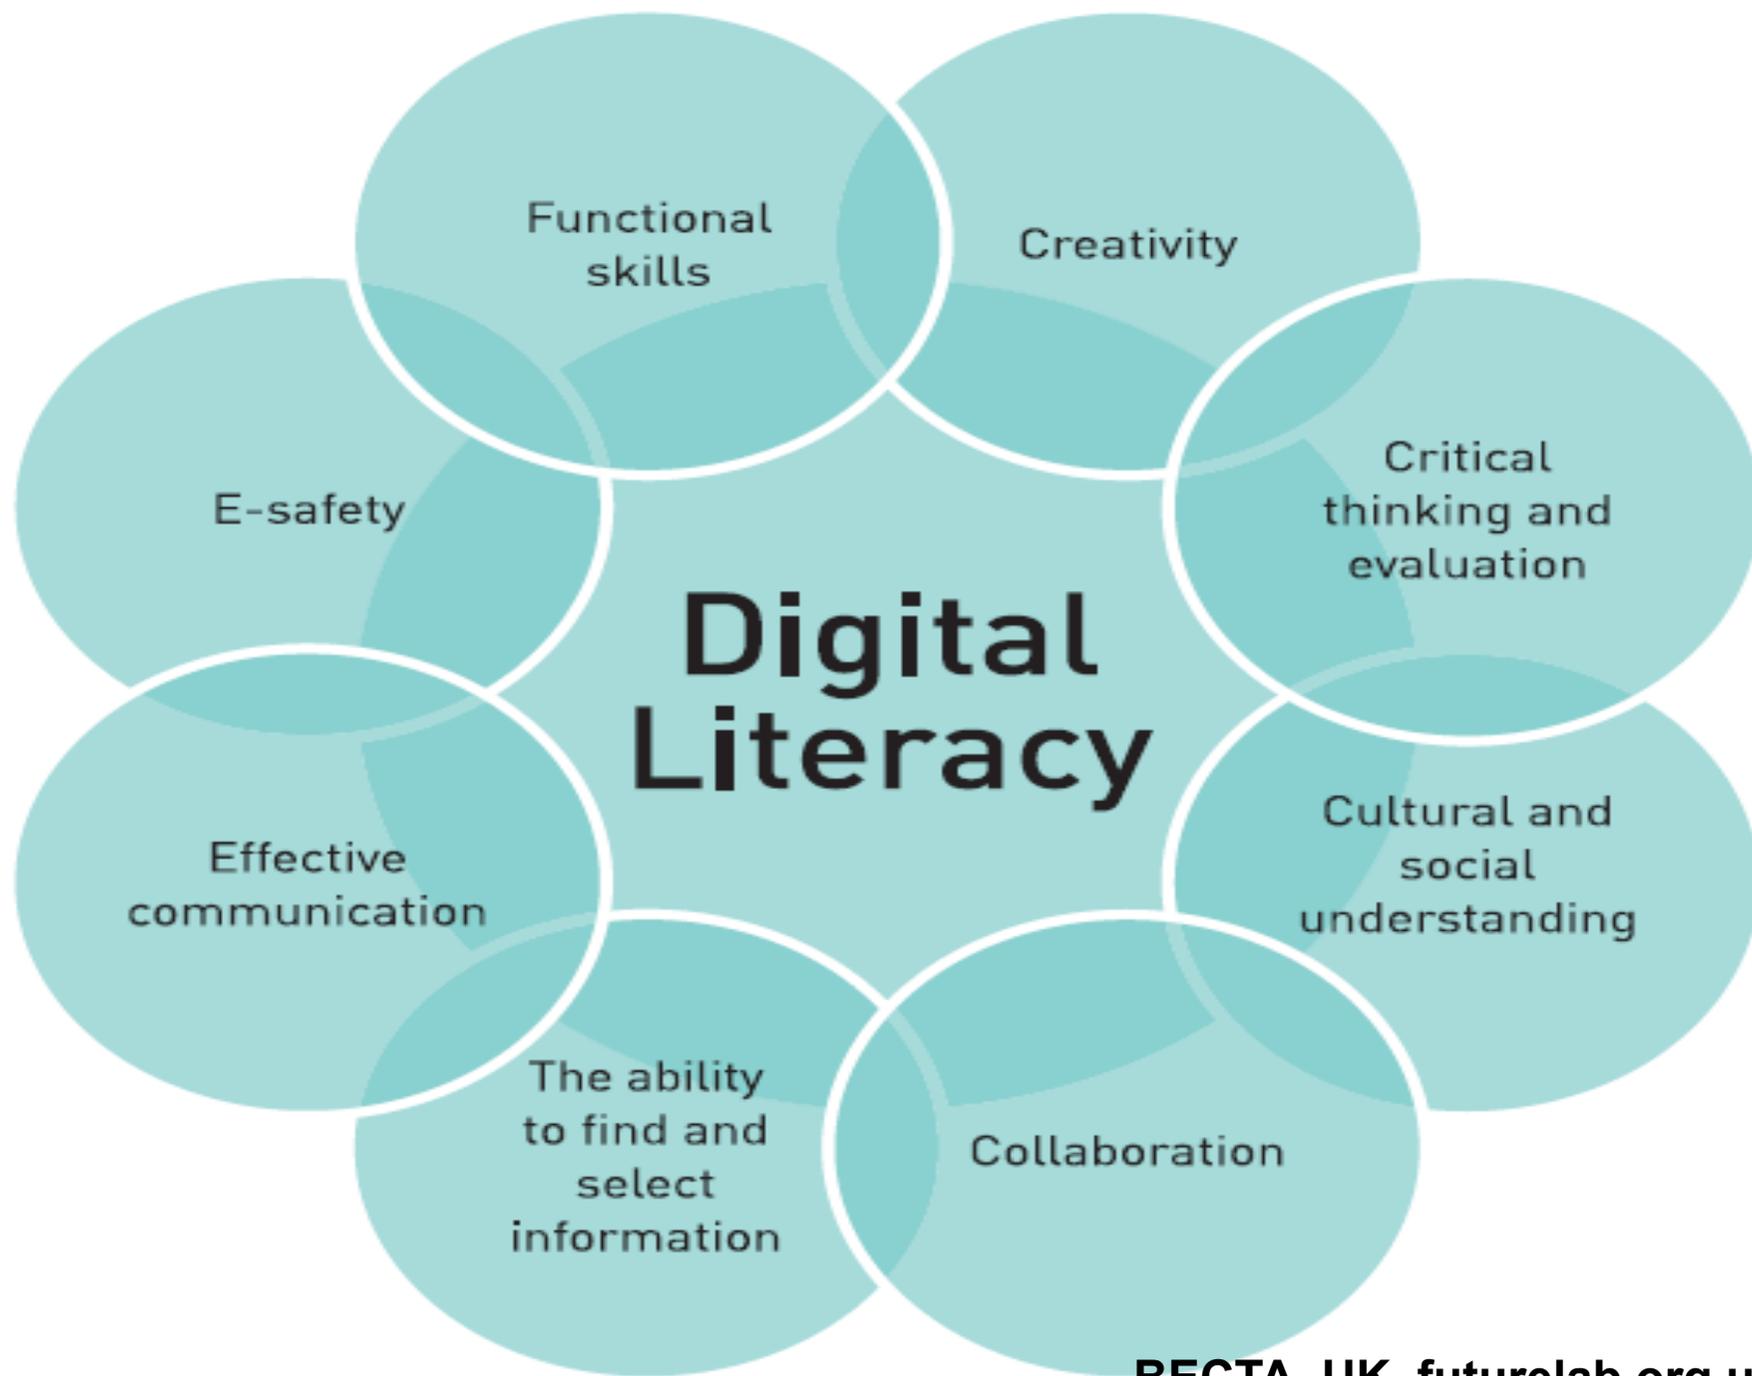

Informatics ⇔ general education, e-literacy, theoretical,
developing and understanding software

Technology:

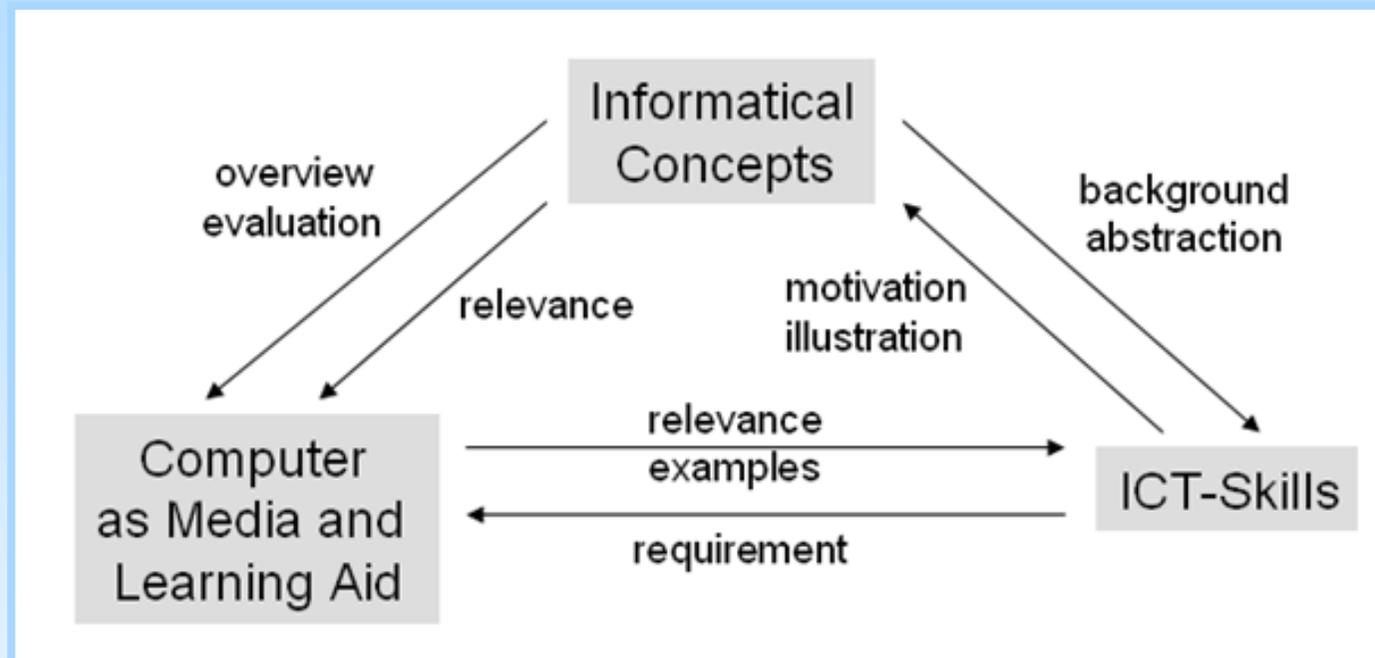

The study of or a collection of techniques (Wikipedia!)

The words *informatique* in French and *Informatik* in German do **not** mean the same as *informatics*.

Rather, they are much closer to **computer science**.

Synthesis of Informatics Education

Synthesis of Informatics Education (Hubwieser 2003)

Computers are

- **objects of didactical reflection (Informatics),**
- **tools for filing, organising and presenting digital information (ICT),**
- **media for learning and teaching (E-Learning).**

Facts beyond theoretical considerations

Facts:

The subject „**Informatics**“ exists and has been established in the Gymnasium-Oberstufe since 1985 (obligatory and as elective course, centralized curriculum)

Since 1990 offered in grades 7 and 8 (13/14 years) electively

This shift of imparting „digital literacy“ from upper secondary level to the lower secondary level is necessary.

School autonomy since 1995 lead to many school profiles, where ICT/Informatics plays an important role.

Legitimation of the subject Informatics?

Recent report from Austria's Ministry of Education

- Autonomy of schools to alter timetables and introduce new subjects
- New curricula
- **Change from input orientation to measuring output**
- Establishment of educational standards (Math, Languages)
- Offering support of the **ECDL** (and other IT-certificates)

Legitimation of the subject Informatics

Deriving the necessity and **legitimation**
for an **independant** subject Informatics at schools

Efforts in Germany:

- Schwill (Fundamental Ideas)
- GI-Recommendations 2000, 2004,
- Breier, Hubwieser, Friedrich, Schubert, Humbert, ...

Pragmatical approach in Austria:

- Little central controlling at the expense of autonomy of schools
- Competition among school(types) in aquiring pupils/students by means of a reinforced offer of **Informatics** and **later** upcoming **ICT** ⇒ Is ICT replacing Informatics?

Informatics as a generic term?

Autonomy in Austria does not lead only to school specific timetables and curricula, but also to various terms for almost the **same** subjects and even contents!

IT, ICT, Introduction into Informatics, Basic Education in Informatics or even word processing ⇒ **Suggestion: generic term: „Informatics“**

Hubwieser: „Unfortunately the term Informatics is misused for every activity with the computer. The spectrum reaches from a computer aided video course to elementary typewriting“

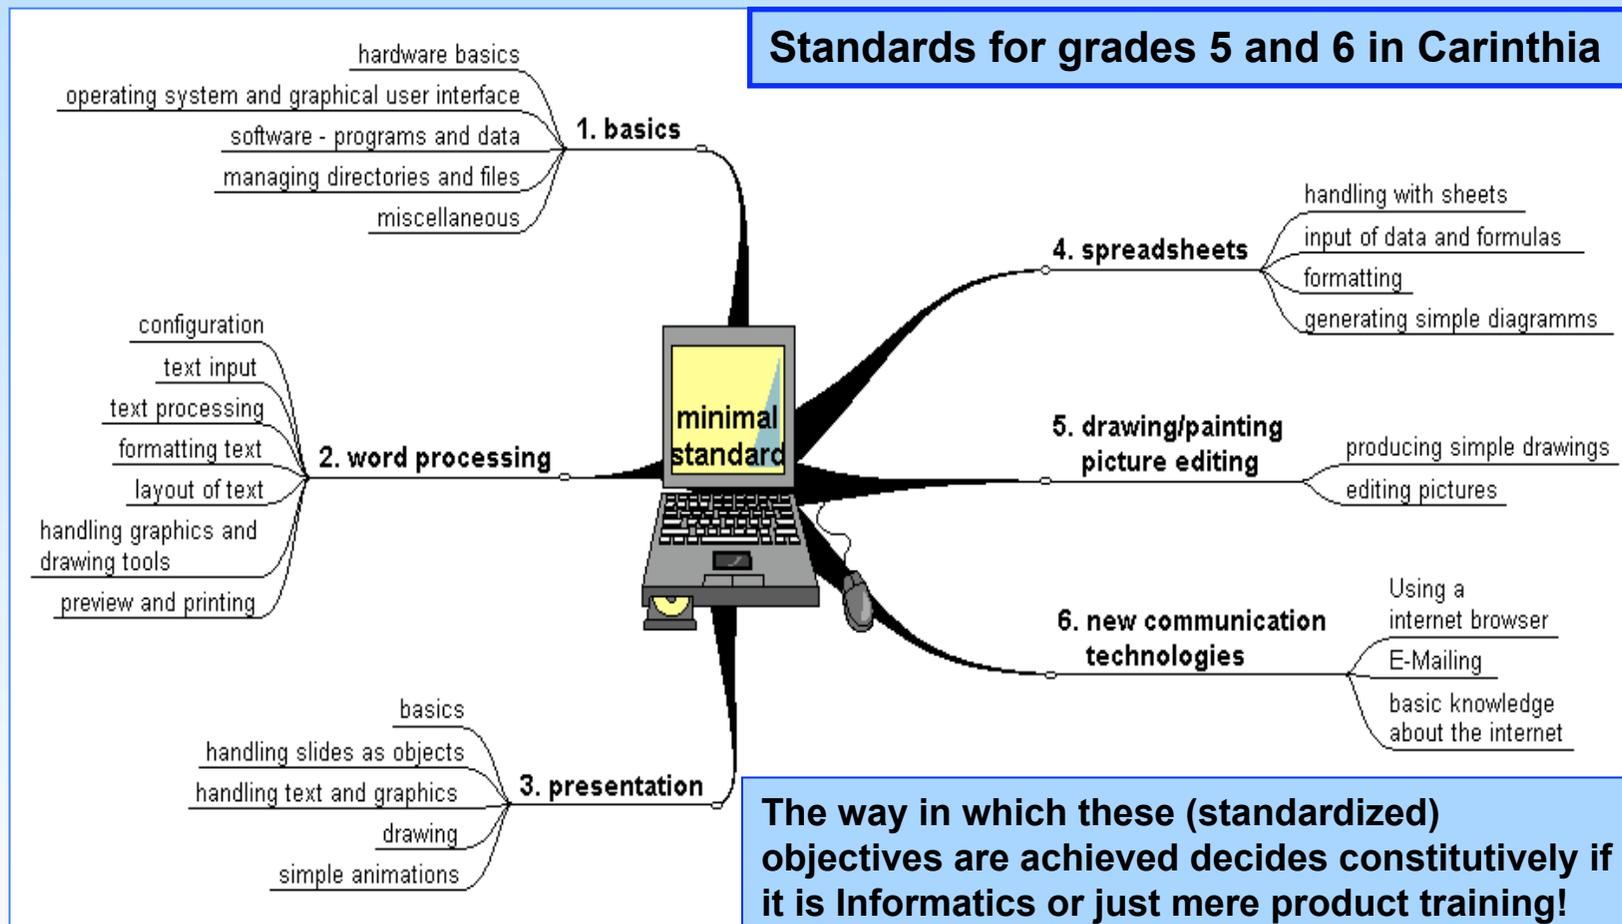

Bavaria: Central curriculum for all pupils in the „Gymnasium“ beginning in the grades 6 and 7 in „Gymnasium“ (one hour a week),

Six content areas:

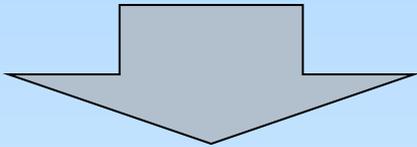

Graphics (OO-principle), Editing Text, File Systems, Communication by E-Mail, Hypertext-Structures, First Steps in Programming (Algorithms, Robots)

Informatics as a generic term?

Is this „Informatics“?

On the Way to a General Framework

... for general educating schools
(lower secondary and upper non-vocational education)

Refining the „Final Exam“ Competence Oriented

Upper secondary level	12 th grade	Informatics as an elective course	Informatics as a compulsory subject in the framework of autonomic decisions	E-Learning initiatives, integration of the computer in other subjects	No informatics
	11 th grade				
	10 th grade				
	9 th grade	Informatics for all pupils (compulsory curriculum)			
Lower secondary level	8 th grade	Non obligatory introduction into Informatics	Informatics as a compulsory subject in the framework of autonomic decisions	E-Learning initiatives, integration of the computer in other subjects	No Informatics
	7 th grade				
	6 th grade				
	5 th grade				

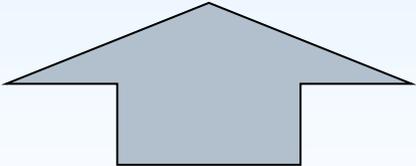

How many students do we expect to choose Informatics as an elective course?

Important „sandwich“ subject!

Defining Educational Standards

Normalizing effect

Substance and Structure Reference Model

Terminology

Informatics (Computing Science)

The science dealing with the design, realization, evaluation, use and maintenance of information processing systems; including hardware, software, organizational and human aspects, and the industrial, commercial, governmental and political implications (UNESCO/IBI).

Informatics Technology

The technological applications (artefacts) of informatics in society.

Information and Communication Technology (ICT)

The combination of informatics technology with other, related technologies, specifically communication technology.

In this document these definitions have been collapsed into one, all encompassing, definition of Information and Communication Technology

ICT

This implies that ICT will be used, applied and integrated in activities of working and learning on the basis of conceptual understanding and methods of informatics.

Student Curriculum

A. ICT Literacy

Contents

A1* Basic Concepts of ICT

A2 Using the Computer and Managing Files

A3 Word Processing

A4 Working with a Spreadsheet

A5 Working with a Database

A6 Composing Documents and Presentations

A7 Information and Communication

A8 Social and Ethical Issues

A9 Jobs and/with ICT

* This module could be integrated with other core modules.

For a description of the Units see [appendix A](#)

D. ICT Specialisation (Appendix D)

Topics include: basic and advancing programming, planning information systems, designing process control systems, and project management.

Contents

Specialisation Preparation Module

SP1 Introduction to Programming

SP2 Top-Down Program Design

General Specialisation Module

GS1 Foundations of Programming and Software Development

GS2 Advanced Elements of Programming

Vocational Specialisation Module

VS1 Business Information Systems

VS2 Process Control Systems

VS3 Project Management

Curriculum (and competencies)

ONE OF BENTO GONCALVEZ RECOMMENDATIONS, 2009

Education and technology for a better world requires the continuing renewal of the ICT curriculum alongside informatics and computer science. Informatics and the pedagogy of informatics teaching help with the learners' creativity with abilities in many domains. Digital literacy complements informatics with differing curriculum and competencies with many teachers requiring clearer standards for both. The curriculum should include the history of computing to widen the learners' understanding of computing, its recent timeline and rapidly changing impacts.

“We should try to produce standards in digital literacy which could be used as recommendations for all (initial) teacher training in universities.”

“To compose an international group of educators to (re)define the core aims of the curriculum of informatics and computer science – the subject has changed, the students have changed, education has changed since UNESCO and other comparable institutions established the standard content.”

FITness program (2000, US), competence founded on three pillars

Contemporary skills

the ability to use various computer applications

Foundational concepts

the basic principles and concepts of computing
that form the basis of computer science

Intellectual capabilities

the ability to apply information technology
in particular situations and to use this technology
to solve new problems

Peter Micheuz, SIRIKT 2012

ACM Curriculum 2003, Lower Secondary Education, K8

Computers and software applications

[as knowledge of the computing environment]

- Parts of a personal computer
- Standard software
- Operating systems
- Networks
- World Wide Web and E-Mail

Problem solving with computer science

[as a way of thinking that uses computers as
a creative medium for solving problems of all kinds]

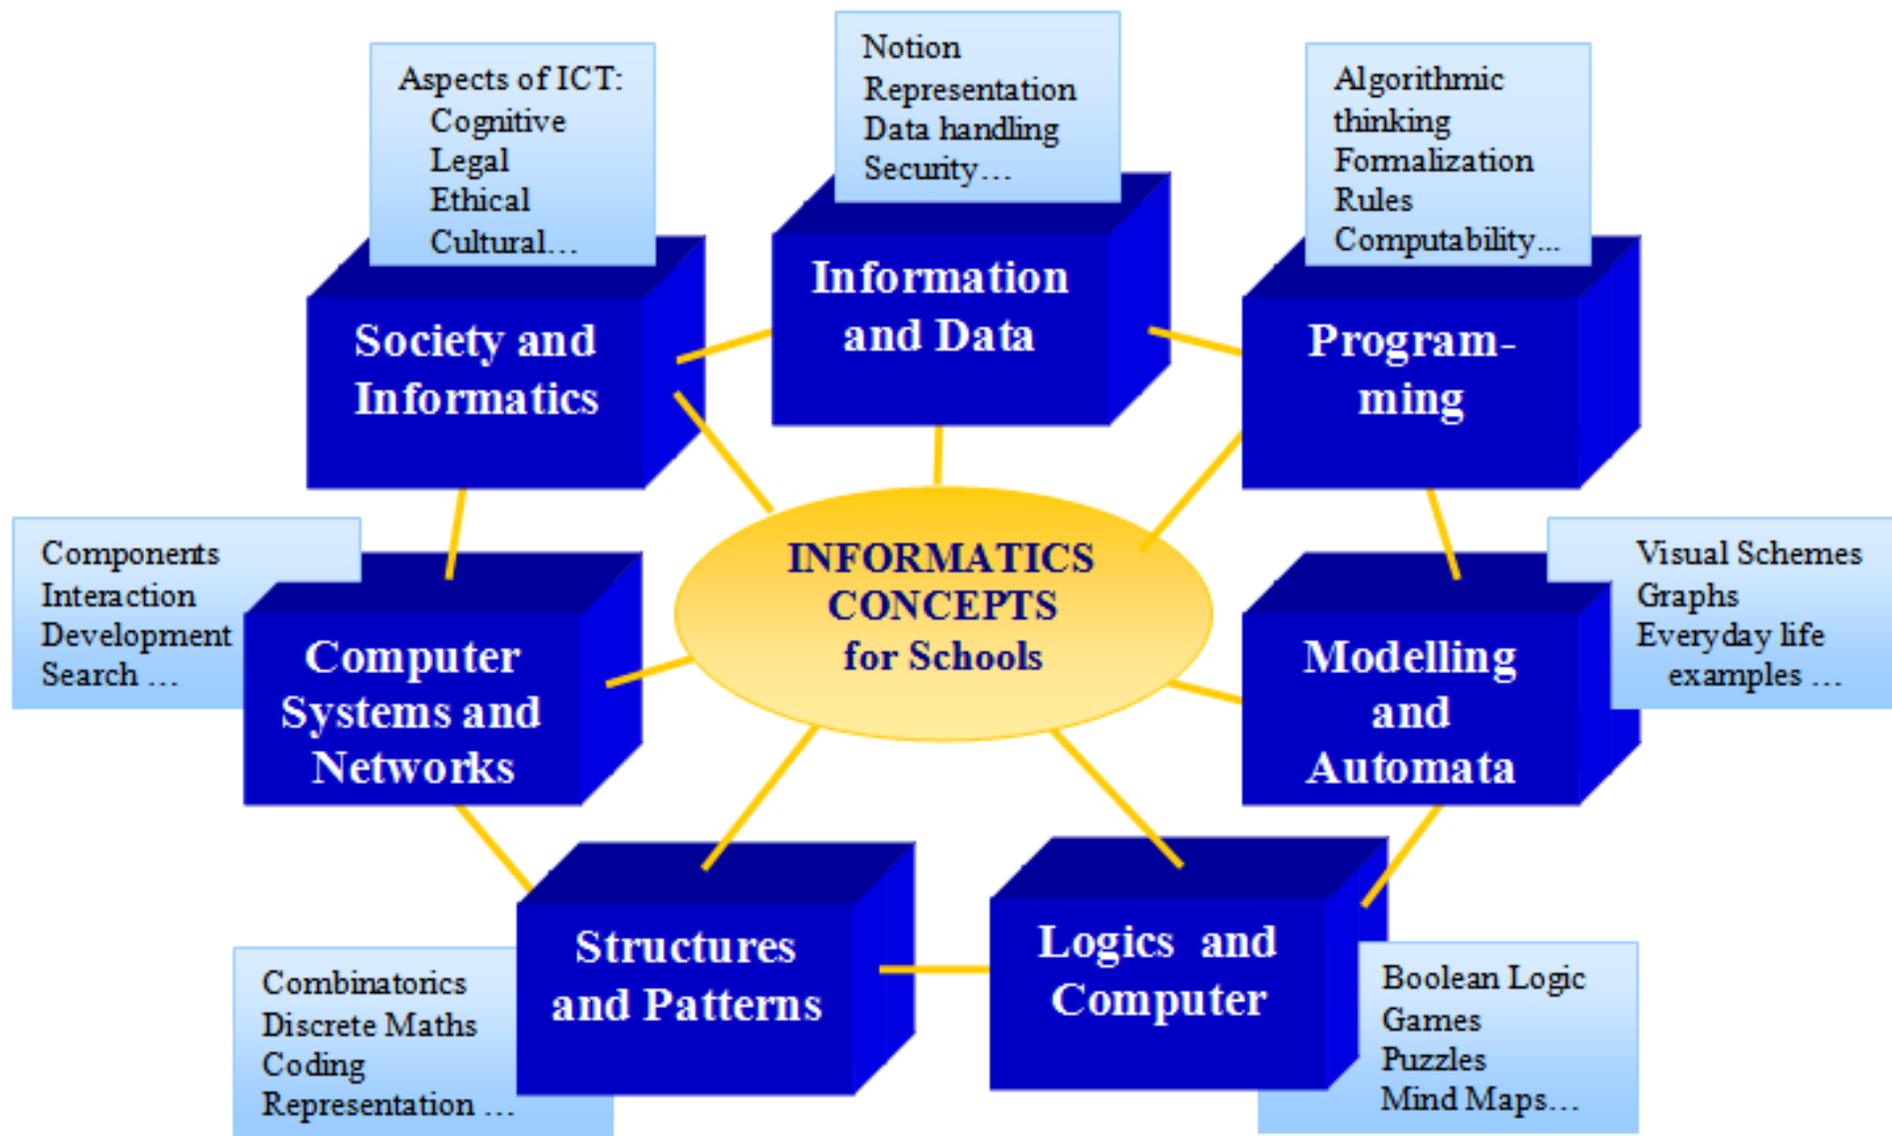

- Representing information digitally
- Problem solving and algorithms
- Computer programming

Social context of computing

[as an appreciation for the complex and changing interactions
between computing, individuals, organizations, and culture]

- Privacy and security
- evaluating and using information from networked sources
- human-computer interaction
- computers in society

Peter Micheuz, SIRIKT 2012

Summarized key informatics concepts for schools (Dagiene,2011)

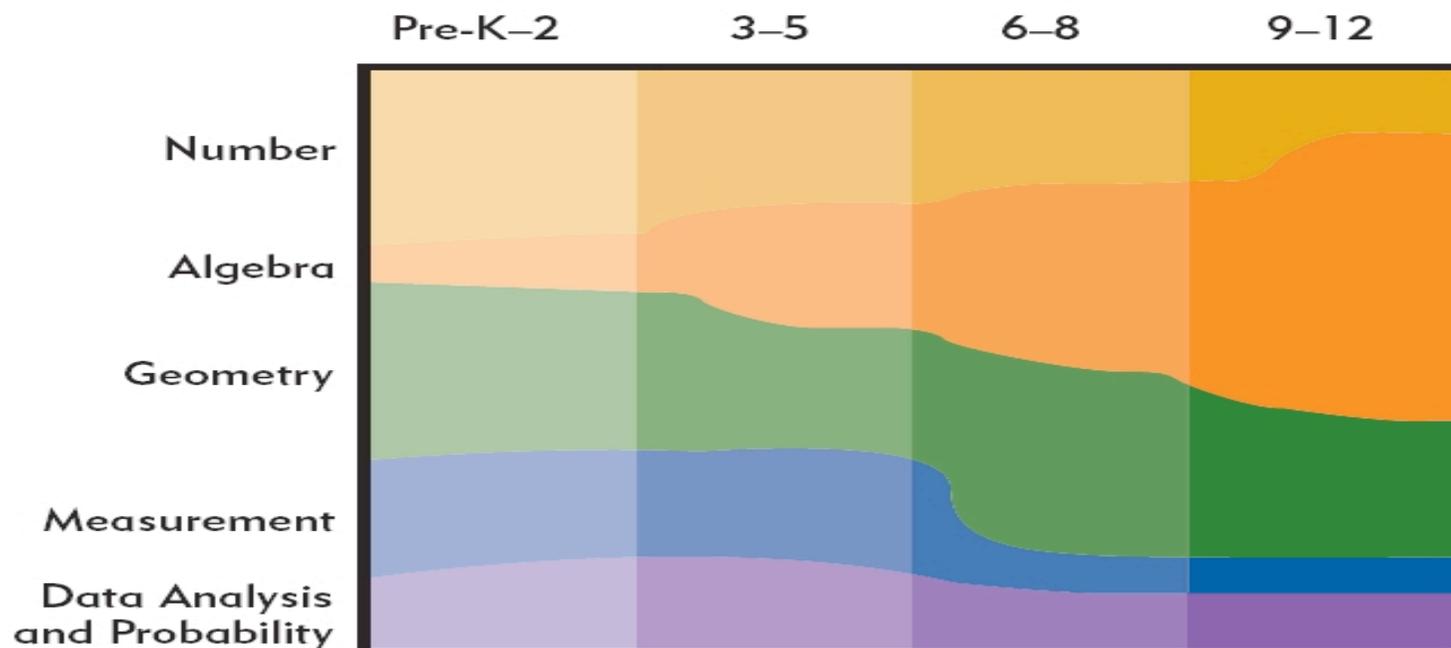

US: Computing Education in 17 areas:

**Software design | Hardware design |
Creation of digital artifacts | Abstraction | Logic |
Algorithm development and implementation |
Programming paradigms and languages |
Theoretical foundations | Networks | Graphics |
Databases and information retrieval | Information
security and privacy | Artificial intelligence | The
relationship between computing and mathematics |
The limits of computation | Applications in
information technology and information systems |
The social impacts of computing.**

Textile and Technical Handicrafts	~2	~1	~1	~2	3-6
Activities and Sports	~4	~4	~3	~3	13-19
Room for new subjects as Informatics / ICT	0-2	0-2	0-2	0-2	0-8
Total hours per week	26-30	29-32	29-33	29-33	120

Table 1: Current norm-timetable and scope of hours at lower secondary level

Digital Competence

Definition:

Digital competence involves the confident and critical use of Information Society Technology (IST) for work, leisure and communication. It is underpinned by basic skills in ICT: the use of computers to retrieve, assess, store, produce, present and exchange information, and to communicate and participate in collaborative networks via the Internet.

Essential knowledge, skills and attitudes related to this competence:

Digital competence requires a sound understanding and **knowledge** of the nature, role and opportunities of IST in everyday contexts: in personal and social life as well as at work. This includes main computer applications such as word processing, spreadsheets, databases, information storage and management, and an understanding of the opportunities and potential risks of the Internet and communication via electronic media (e-mail, network tools) for work, leisure, information sharing and collaborative networking, learning and research. Individuals should also understand how IST can support creativity and innovation, and be aware of issues around the validity and reliability of information available and of the legal and ethical principles involved in the interactive use of IST.

Skills needed include the ability to search, collect and process information and use it in a critical and systematic way, assessing relevance and distinguishing the real from the virtual while recognising the links. Individuals should have skills to use tools to produce, present and understand complex information and the ability to access, search and use Internet-based services. Individuals should also be able use IST to support critical thinking, creativity, and innovation.

Digitale Baustelle Sekundarstufe I

*Wer hohe Türme bauen will, muss lange
beim Fundament verweilen.
Anton Bruckner*

An der Situation informatischer, informationstechnologischer und medienpädagogischer Bildung in der österreichischen Sekundarstufe I hat sich seit mehr als zehn Jahren wenig geändert. Im Lehrplan 2000 stiefmütterlich berücksichtigt und der Schulautonomie überlassen, stellt sie sich derzeit inhomogen, unübersichtlich und unkoordiniert dar.

Seit einiger Zeit ist die Welt eine andere, nämlich eine zunehmend digitale. Die

SchülerInnen haben den Anspruch, auf diese spätestens in der Sekundarstufe I entsprechend vorbereitet zu werden. Bisher allerdings fehlt es im Bereich der 10-14 Jährigen an einem klaren nationalen Bildungsauftrag und an konkreten Lehrinhalten und Lernzielen für diese Altersgruppe.

Classification Scheme for Austria's Lower Secondary Level (K8 – 14 years)

Framework of Reference for Digital Competences - Competence Matrix for Basic Informatics Education

		Basic Competencies Level I	Extended Competencies Level II	Special Competencies Level III
Media Reflexion Related Topics	1. Information Technology, Human and Society			
	1.1. Benefits and Risks	Basic reflection on using the computer and its impacts. Basic Knowledge of vocational, social and historical facts.	Founded risk assessment. Solid knowledge in related topics. Knowledge of vocational, social and historical contexts.	Foundational and coherent knowledge. Evaluation of using digital media.
	1.2. Privacy, Law and Responsibility			
	1.3. Historical and vocational aspects			
Media Knowledge	2. Informatics Systems			
	2.1. Hardware	Basic IT-knowledge and practical skills on the level of operating systems.	Detailed IT-knowledge, fluent rote skills and basic knowledge of related concepts in the context of informatics systems.	Advanced knowledge of technical terms. Understanding of concepts and simple models. Evaluation of informatics systems. Advisory skills.
	2.2. Software, Operating System and Filemanagement			
	2.3. Networks			
Use and Production of Media	3. Software Applications			
	3.1. Documentation, Publication and Presentation	Basic knowledge and skills to accomplish standard tasks in the context of application software.	Experienced use of application software. Solving of standard tasks in school and everyday live through selection of appropriate application software.	Extended tool competence. Conceptual understanding of application software. Problem solving competence and dynamic capabilities.
	3.2. Calculation and Visualization			
	3.3. Information, Communication and Cooperation			
Principles and Computational Thinking	4. Informatics Concepts			
	4.1. Representation of Information	Basic knowledge of informatics terminology and elementary connections. Execution and description of simple instructions.	Basic conceptual understanding of human-machine communication. Simple modeling of algorithmic tasks and their implementation.	Foundational knowledge and basic understanding. Abstract thinking. Creative solutions for algorithmic problems.
	4.2. Data, Relations and Structures			
	4.3. Algorithms, Programming and Automatization			

FIRST APPROACH BEFORE MARCH 2011

	4.4. Coordination and Controlling of Processes			

about 70 „I can“ statements

3 Anwendungen

3.1 Dokumentation, Publikation und Präsentation

- Ich kann Texte zügig eingeben, diese formatieren, kopieren, einfügen, verschieben und löschen.
- Ich kann Texte überarbeiten und korrigieren.
- Ich kann Dokumente und Präsentationen unter Einbeziehung von Bildern, Grafiken und anderen Objekten gestalten.
- Ich kann digitale Texte, Bilder, Audio- und Videodaten in aktuellen Formaten mit verschiedenen Geräten und Anwendungen nutzen und gestalten.

3.2 Berechnung und Visualisierung

- Ich verstehe den grundlegenden Aufbau einer Tabelle
- Ich kann mit einer Tabellenkalkulation einfache Berechnungen durchführen und altersgemäße Aufgaben lösen.
- Ich kann Tabellen formatieren.
- Ich kann Zahlenreihen in geeigneten Diagrammen darstellen

4 Konzepte

4.1 Darstellung von Information

- Ich kann einige Informationen aus dem Alltag kodieren und dekodieren.

4.2 Strukturieren von Daten

- Ich kann mit Programmen Daten erfassen, speichern, ändern, sortieren, nach Daten suchen und diese selektieren.
- Ich weiß, dass es verschiedene Datentypen gibt (Ganzzahl, Gleitkommazahl, Text, Datum, Wahrheitswert), die bei der Verarbeitung beachtet werden müssen.
- Ich verstehe Ordnerstrukturen und kann eigene erstellen.
- Ich kann Tabellen in verschiedenen Anwendungen anlegen und ändern.

4.3 Automatisierung von Handlungsanweisungen

- Ich kann eindeutige Handlungsanleitungen (Algorithmen) nachvollziehen und ausführen.
- Ich kann einfache Handlungsanleitungen (Algorithmen) verbal und schriftlich formulieren.
- Ich kann einfache Algorithmen aus dem Alltag nennen und beschreiben.
- Ich kann einfache Programme in einer geeigneten Entwicklungsumgebung erstellen.

Important „sandwich“ subject!

Defining Educational Standards

Normalizing effect

Substance and Structure Reference Model

Curriculum for grade 9

The students should be able to ...

- **manage information and organize their learning themselves with suitable software**
- **convert existing sources of information and produce different information representations on the basis of previous knowledge**
- **use and systemize contents and structures as well as results and present multimedially their individual work**
- **handle standard software for written correspondence, for documentation, for the publication of work, for multimedia presentation as well as for communication**

Curriculum for grade 9

The students should be able to ...

- use calculation models and evaluate and interpret the results and to use a simple data base
- to know substantial terms and methods of computer science and their typical mindsets, their historical development as well as their technical and theoretical basis
- get insight into the basic principles of automats, algorithms and programs
- know substantial measures and legal bases in connection with data security, data security and copyright
- to know about the effects of information technology on employment and the society
